**CRYOSTAT**

➤ **PLEASE:**

1. Bring your own low profile Thermo Scientific MX35 Ultra Blades (Part #3051835)

2. Remove tissue with clean paper towel, use 70% ethanol to wipe down all inside surfaces, & wash tissue holders with water when finished.

3. Leave cover retracted to prevent condensation

➤ **PLEASE DO NOT:**

1. Leave blades in cryostat after use

2. Leave frozen samples in cryostat overnight – there is a nightly defrost cycle

3. Let the glass roll-plate drop onto the blade. This will chip the roll-plate.

4. Force the handle if it’s in the locked position. The handle should turn with ease. If you feel resistance, turn off the brake first.

5. Change the angle of the blade carrier and forget to change it back to default position.

➤ Report all problems and requests for use to Eric Zhang.
